

SAFETY FLASH: GENERAL MAINTENANCE

GOOD PRACTICE

- ✔ Executing the periodic maintenance on time.
- ✔ Using appropriate PPE.
- ✔ Using the appropriate tools (in case of working on deck on a tanker, only use explosion safe equipment).
- ✔ Informing any abnormalities to the captain.
- ✔ Using the Lock-out/Tag-out (LOTO) method.
- ✔ Using a permit-to-work when necessary.
- ✔ Having insight into the state of the maintenance (you can document your maintenance in a maintenance program).
- ✔ Executing the maintenance according to the manufacturer's instructions.
- ✔ Executing the maintenance by qualified personnel or a certified maintenance company.
- ✔ Informing co-workers when maintenance is taking place.
- ✔ Ventilating the space when painting in an enclosed space. Also storing paint cans and/or solvents in ventilated spaces.

Maintenance and inspections according to planning, contributes to the technical reliability of the barge. Errors can be noticed and resolved in time.

BAD PRACTICE

- ✘ Using wrong or unsuitable tools (using tools for purposes that it is not made for).
- ✘ Expired warranties because adjustments were made.
- ✘ Maintenance by unqualified people.
- ✘ Not wearing PPE during maintenance.
- ✘ Not resolving identified deficiencies (immediately).

ACTION QUESTIONS:

- What tools are on board and are they appropriate for the maintenance activities?
- Which abnormalities do we come across during maintenance?
- What is the LOTO-method (Lock-out/Tag-out) and when do we use a permit-to-work?
