

PLATFORM ZERO INCIDENTS

SF21-57

SAFETY FLASH: LADDERS & STAIRWELLS

GOOD PRACTICE

- ✔ Use markings and anti-slip.
- ✔ Make sure the area is well lit.
- ✔ Make sure ladders are secured.
- ✔ Wear appropriate footwear.
- ✔ Keep your hands free so you can hold the ladder with two hands (use of backpack).
- ✔ Decent with you face towards the stairs.
- ✔ Do a LMRA (Last Minute Risk Assessment) (check if the steps are safe to use, also when going on or from board).

On average **1 or 2 times a month** a crewmember falls down a stairwell or ladder. Frequently, the crewmember is injured, sometimes this even leads to permanent disability. Therefore, always be alert when you or your colleague steps on a stairwell/ladder.

BAD PRACTICE

- ✘ Materials on the steps.
- ✘ Dirty steps; pay extra attention to quay side stairs that can be slippery because of algae or ice.
- ✘ Ladders/stair in bad shape (dirty, broken, damaged).
- ✘ Both hands are not free because you carry something.

ACTION QUESTIONS:

- What is the state of the ladders and stairwells on our ship? (pass through every space)
- What can we do to enhance the state of the ladders and stairwells? What would we need?
- How can we help each other to stay alert?
